Information System and Its Advantages in Business

Learning Outcome:

Understands systems theories, business processes and basic concepts on IT.

Create a map of processes that allows identifying areas in an information system, using IT tools to generate reports based on the company's needs.

Ask your partner:

- Do you think information systems represent an advantage for a business? Why? Why not?
- What kind of technological apps would you use to facilitate tasks in your own business? Why?

Can Do Statements:

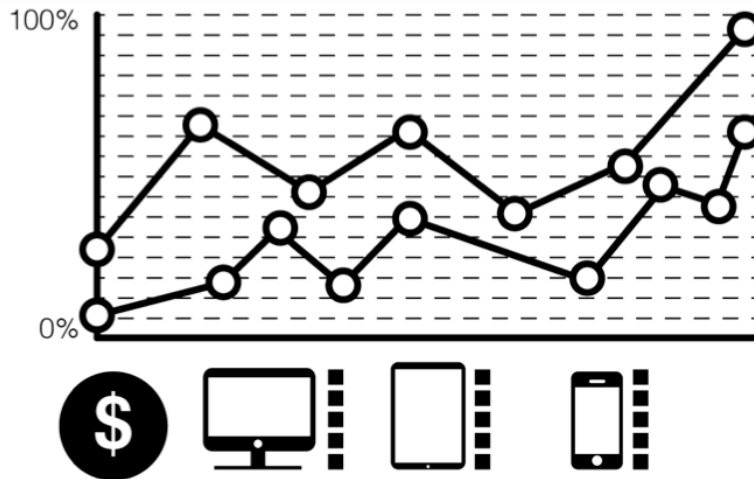

- I can talk about information systems to enhance a business.
- I can describe in a simple way as - Is business and To-Be business processes.
- I can give business processes examples.

Let's Explore!

Information systems a help for business processes!

Instructions: Read the text below.

Information systems (IS) have multiple uses in today's world because many entrepreneurs search effective tools to promote their business. However, many companies do not know how to get or use those IS and do not even know how to structure them.

Information systems can not only enhance a business but provide an alternative to organize business processes, make decisions or take actions in emergencies. Additionally, a company does not need a big investment to get the appropriate IS tool, but an investment for a critical analysis of business processes in the present to establish a strategy for the future.

We don't have to go so far to understand how to make a business process analysis or diagram the business process. We simply have to analyze the existing state of the business process, which is the As-Is process integrated by a series of steps to identify and describe shareholders performances and roles. As a consequence, the company does not need more than the As-Is process results to redesign the business in the To Be process and get a perspective of how the business will work. So, this last one is not accurate if it doesn't consider the As-is process.

The purpose of the As is process is not other than describing the current state of a business, for example, the process to pay a credit card bill. Initially, users have to take turn in a long bank line but with the quick extension of information systems in computers now customers are not for a long time in queue. Now, it is possible for them to make a faster payment using their fingerprint or any kind of middleware system.

So, identifying business difficulties in the present to set up future plans can simplify many tasks if a business works along with information systems.

Let's Practice!

I'm not sure about what Information systems are.

Instructions: Read the following sentences based on the text. In front of each sentence write True or False.

1. Information systems don't have one single use, they have a lot of uses. _____
2. Some companies don't know how to get information systems, by the way, it's very easy. _____
3. Many companies know how to structure IS. _____

Let's Practice!

You don't need to waste your time at a line.

Instructions: Select the correct answer.

1. People _____ to leave home for paying a credit card.
a. don't need
b. doesn't need
c. don't needed
2. You _____ to stand in a long bank line with an IS in your computer.
a. doesn't have
b. don't have
c. don't had
3. You _____ worried thanks to IS like middleware and fingerprint systems.
a. don't feel
b. don't felt
c. doesn't feel
4. A company _____ not need a big investment to get the appropriate IS tool.
a. did
b. do
c. does
5. The company _____ more than the As-Is process results to redesign the business in the To Be process.
a. doesn't require
b. didn't required
c. don't require

Extension Activity

A mind map about As-Is business and To-be business.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about As-Is business and To-be business.
- Make two mind maps about what As-Is business and To-be business are.
- Include pictures and main ideas to explain how each business work.
- Share your mind maps with the class.

Self-Assessment

Yes

No

- I find information about As-Is business and To-be business. ☐ ☐
- I organize As-Is business and To-be business concepts in mind maps. ☐ ☐
- I understand how As-Is business and To-be business work. ☐ ☐

Target Words

- **enhance** (verb): to improve or increase the value of something
e.g. Information systems can not only enhance a business but provide an alternative to organize the business processes.
- **investment** (noun): money or goods devoted for future income or as revenue
e.g. A company does not need a big investment to get the appropriate IS tool.
- **diagram** (verb): to represent something in an organized structure similar to a chart or layout
e.g. We don't have to go so far to understand how to make a business process analysis or diagram the business process.
- **shareholder** (noun): a person, organization or group that holds one or more portions of a business
e.g. The As-Is process integrated by a series of steps to identify and describe shareholders performances and roles.
- **queue** (noun): a waiting line
e.g. Customers are not for a long time in queue.
- **middleware** (noun): a software that enables the exchange of information between two applications within the same environment
e.g. It is possible for them to make a faster payment using their fingerprint or any kind of middleware system.

Learning Points

Simple present tense- negative form

You use the simple present tense to talk about something that is true in the present, a habit a general condition of a subject.

With the present tense you use do and does as auxiliary verbs to make negatives. It is formed as follows:

Do not: **don't** is used for first and second person, Let's see some examples:

I do not (don't) avoid the importance of information systems
You do not (don't) like defective computer applications
They do not (don't) use the appropriate tools to improve business.
We do not (don't) have to concentrate in useless systems

Does not: **doesn't** is used for the third person.

It does not (doesn't) provide enough information to the business.
She does not (doesn't) analyze possible IT apps for the business.
He does not (doesn't) play with company values.

Check the structure of the negative statement in simple present and you will see the main verb is used in the base form:

- ✓ The business doesn't **consider** information systems
- X The business doesn't **considers** information systems

Keep in mind the conjugation for the verb To Be is **different**, you just need to add NOT after the corresponding conjugation, you can also make contractions:

CONJUGATION

I am not
You are not
He is not
She is not
It is not
We are not
They are not

CONTRACTION

I'm not
You aren't/ You're not
He isn't/ He's not
She isn't/ She's not
It isn't/ It's not
We aren't/ We're not
They aren't/ They're not

Examples

- *However, many companies do not know how to get or use those IS and do not even know how to structure them.*
- *A company does not need a big investment to get the appropriate IS tool, but an investment for a critical analysis of business processes.*

Learning Points

As-Is business and To-Be business

There are two essential business processes you can use to identify how your business works at the moment and determine how it will work. Those two business processes have demonstrated to be effective for entrepreneurs who want to innovate considering business requirements.

Is process	A To-Be process
Current state process	Future state process
It describes the existing state of the business process in an organization.	It describes the upcoming state of a business process in an organization.
It contributes to identify how the business process work today, the common deviations and all concerned to this.	It contributes to identify how the business process will work, at some point in the future, once changes are implemented.
	Those changes can be technological changes or business process changes.
How to Analyze an "As Is" Business Process	How to Analyze a "To Be" Business Process
	redesigned and improved business process
1. First you need to contact Stakeholders who perform 2. Stakeholders who understand the process. 3. Stakeholders who represent each role in the process. 4. Finally get information about the current state using different methods, for example interviews, observations or a simple document review.	1. Description 2. List of roles 3. List of steps and exceptions 4. It exists as a part of a project. 5. Review and analyze the "As Is process". 6. Define business objectives 7. Create your business analysis plan. 8. Finally create your " to be" process documentation
Redesign and improvement To-Be process will improve based on the As-Is process--- To-Be process takes into consideration the deficits identified in the As-Is process and the goals of the business. The area of work that focuses on improving business processes is called business process redesign. Individuals performing this work focus on understanding the As-Is process and how to improve it in the To-Be process.
