- I can list the different types of business models.

Ask your partner:

- What kind of businesses do you know?
- What business services do you request the most?

Let's Explore!

Variety in Business!

Instructions: Read the text below.

Every time you talk about an entity that can offer services and products, you are talking about a business. The concept of a business can indicate the activity of any social or governmental organization, as well as any private or public enterprise. It is common to analyze businesses and make predictions base on real information when we examine customers' needs. In that way, a business fact can determine realities of business procedures. It's important to identify that there are different types of business facts. First, 'Facts of Life' keep a close relation with the nature of the business. Second, 'Facts of Policy' which refers to the rules, laws, or conventions to implement a constant regulation of the business. Lastly, 'Facts of Implementation' that can be the limitations of the business structure.

Now that you know about business facts, you can identify different business models. There's a long list of models, however, I mention here the most important: the business data model to organize business requirements for a database, the business process model to represent the business requirements, such as procedure guides, hiring employees, and developing prices. The business event model refers to the state of an entity, the interactions it has, and the events that a company can modify when they find a dissatisfied customer.

Moreover, the business location model emphasizes on facilities and transportation networks as well as communication, with the purpose of staff movement. There's also a business sociopolitical model which analyzes different parties and their relations with providers, end users, and competitors in the social sphere. So, you can think of a business considering a wide view of business models and facts. Remember, business involves much more than monetary investment, but a hard work to understand and use the appropriate information system. system entirely, but an essential part of it, which helps us process data.

**Let's Practice!**

Let's expand the concept of business!

Instructions: Proofread the sentences. Correct the mistakes.

Today, we need to discuss about the concept of business. I think we can't define it in an easy way. Let's see, a business is just an entity that couldn't offer services or products. It can't be private or public. In the same way, there are different kinds of businesses, depending on the customers' needs and the type of organization they represent, for example a social or a governmental organization.

**Let's Practice!****Learning What Each Business Model Is About**

- hire** (verb) to engage a person or a party with a company
e.g. The business process model to represent the business work requirements, such as procedure guides, hiring employees, and developing prices.

Learning Points

Verb Can for Possibility

You use the verb **can** for possible situations or impossible situations. It is generally used to emphasize how something is possible in the present.

You use the modal verb **can** when there is a possibility that something could happen. For example, when you talk about a fact:

*This business organization **can** be used as a business process model.*
(you could copy the model used by the business)

*The location of this company **can** provide many advantages.*
(you predict there is a possibility for the company to be successful)

Remember that you use the base form of the main verb after the modal verb **can**, check the structure:

Subject + **Modal verb can** + Main verb in base form + Complement

Examples:

- *It **can** be a great business idea.*
- *The sociopolitical business model **can** take a long time to implement.*

Keep in mind that modal verbs do not require conjugation, so you use **can** for all the subject pronouns, with no distinction. Look at these examples:

- ***I can** invest in the business if he gets some more money.*
- ***You can** develop a better business strategy only by studying more.*
- ***He can** work for a sociopolitical business on vacation.*
- ***She can** analyze business facts better if she gets more information.*
- ***It can** be difficult to recover a failed business.*
- ***We can** support external parties if they get problems.*
- ***They can** apply better business strategies if they create new alliances.*

Examples

- *Every time you talk about an entity that can offer services and products, you are talking about a business.*
- *The concept of business can indicate the activity of any social or governmental organization.*
- *A business fact can determine realities of business procedures.*
- *Now that you know about business facts, you can identify different business models.*
- *The business event model which refers to the state of an entity, the relationships it has, and the events that can modify company relationships.*

Learning Points

What is a business?

A business is an organization that acquires or creates and sells or exchanges products or services. It involves the people who provide these services and products, as the employees.

Business definition can apply not only to government organizations but to commercial enterprises, as well as social or charitable enterprises; all of them interrelated to define the specific area of work. Let's see some of them:

Types of Business Facts (any truth about the business)		
Type of Fact	Concern	Example
Facts of life	The nature of the business	It is not probable a company stops selling the main product line.
Facts of policy	Rules for the behavior of the business	A student manual in the school can describe the Facts of policy.
Facts of implementation	Limitations imposed to the establishment of the business.	Facilities location, transportation and accessibility in the operation area of a company.

Business Models (A tentative description of something)		
Model	Concern	Examples
Business Process Model	To represent business work requirements. To support manual procedures and applications. Activities organization to control them.	A company that hires employees and needs to represent through the use of a business process model the steps to implement the procedure.
Business Object/Data Model	Relationships among entities and their attributes.	I can create an entity to represent a vehicle, including the attributes to describe it. For example: Color, identification number, etc.

Learning Points

Business Socio-Political Model	It considers different organizations and their alliances or affiliations. It analyzes relationships among customers, providers, vendors, partners, competitors and some others related to the business.	Subsidiary companies, internal vendors or costumers and legal partnerships among others.
Business Location Model	The purpose of this model allows to represent the business location requirements.	A company can use the business location model when it needs to have the network data design to establish communication with their branches.
Business Event Model	Represents the state or condition of any entity or business relationship and all the possible events it can present. It also considers the transition of a condition in the lifecycle of a business.	Events: time events, such as achieving a goal in the planned time, business events such as orders, a customer complain and natural events such as earthquakes.
