Let's Start!

Let's talk about business process

Learning Outcome:

Understands systems theories, business processes and basic concepts on IT.

Create a map of processes that allows identifying areas in an information system, using IT tools to generate reports based on the company's needs.

Can Do Statements:

- I can list the different processes involved in a business.
- I can describe briefly each process involved in a business.
- I can explain the importance and relevance of processes for a business.

Ask your partner:

- Do you consider there is a specific process to make effective business?
- How many times do you think about a business, before its implementation?

Let's Explore!

Considering Ivan business decision

Instructions: Read the text below.

Samuel: Ivan, tell me what is your business plan?

Ivan: Well, there are many sequential processes that structure my business plan, those rely on the business requirements.

Samuel: It's important to have a business plan at the very beginning of the project.

Ivan: Yeah! First, I need to perform an analysis; second, identify the requirements, and then, design a plan.

Samuel: Those are long processes! But, do not forget you also need to make a "product development process" and complete the implementation process in time to achieve the business goal.

Ivan: Of course! That is my concern because we need to do everything on time and apply the plan strategies.

Samuel: So, Can you briefly describe each process?

Ivan: Yes, First, perform the analysis to implement an accounting book to keep record of the money you spent in a business, this also includes to make the inventory of physical and financial assets. Thereafter, use that information to identify the present state of the business, which is the "As Is-process".

Samuel: That's correct! I did it before.

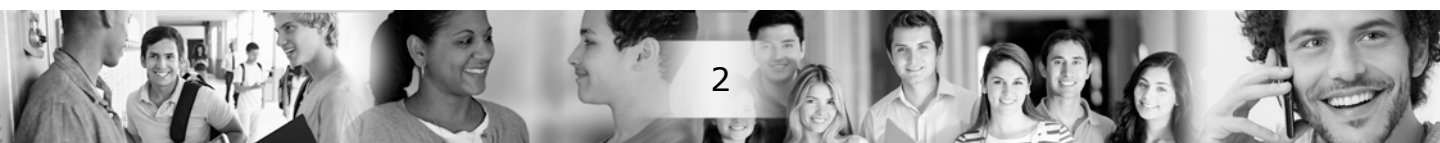

Ivan: After the analysis process, you check the requirements, those initial needs of the customer. Next, start the design to establish strategies, at the same time consider the funding process, this will help you if you get out of cash!

Samuel: Do not forget the minimum that you need is to implement one process at a time.

Ivan: That's pretty important! Thereafter, the development process takes place to register variable such as metrics, milestones and outsourcing process. Finally, the implementation process puts into practice the designed plan, this can take into consideration computer technology in the business.

Samuel: And why is it relevant?

Ivan: Business processes help entrepreneurs to achieve goals in a more effective and innovative way, creating a high company value.

Let's Practice!

What are the business processes for today?

Instructions: Choose the words from the box to fill in the blanks. Use capital words when necessary.

Word Bank

At the / In / At / On the / In the / On / In a / On time

1. You have to perform the analysis ____ Monday.
2. ____ afternoon, you need to identify requirements for your plan.
3. You need to make the product process ____ January.
4. You have a meeting tomorrow ____ 8:00 p. m.
5. We need to do everything ____ and apply the plan strategies.

Let's Practice!

Can you explain to me what each business process is about?

Instructions: Read the sentences. Write the missing word(s) in the blank. Use: third, first, second.

Mary: Can you tell me how to make a good business process?

Josh: Sure, _____, develop the analysis for a business to keep record of money you spend. _____, include financial and physical assets in your analysis. _____, use that information to know how your business is.

Extension Activity

These are necessary processes in business.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about processes involved in a business.
- Write a list explaining what each process is about.
- Write what the importance of those processes for a business is.
- Share your list with your class and discuss about more processes.

Self-Assessment

Yes

No

- I find information about processes involved in a business.
- I list different process in a business.
- I identify the importance of processes for a business.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **outsourcing** (noun): a business practice to hire suppliers and assign them part of the company work
e.g. Start the development process to register variables such as metrics, milestones, and the outsourcing process.
- **sequential** (adjective): occurring after something else, in a sequence
e.g. There are many sequential processes that structure my business plan.
- **metric** (noun): related to the measurement of different values, a metric system
e.g. Start the development process to register variables such as metrics, milestones, and the outsourcing process.
- **inventory** (noun) a list of items such as property, goods, or contents
e.g. This also includes to make the inventory of physical and financial assets.
- **funding process** (noun) steps to get to investors,
e.g. Start the design to establish strategies, and at the same time consider the funding process.
- **financial asset** (noun) representation of monetary value
e.g. This also includes having to make an inventory of physical and financial assets.

Learning Points

Sequence Words for Basic Instructions

You use linking words to connect ideas and give basic instructions. Every time you want to guide a person or a group of people giving them advices, it is useful to employ basic instructions words.

first
before

second
then

next
after

thereafter
finally

For example:

*First, keep in mind the initial client meeting.
After this, contact all the headquarters.*

Every time you are giving basic instructions use the infinitive form of the verb '**without to**', after linking words:

- ✓ *Second, check the transportation vehicles.*
- X *Second, ~~to check~~ the transportation vehicles.*
- ✓ *Finally, state a new procedure.*
- X *Finally, to state a new procedure.*

Remember if you want to indicate what not to do, you use **do not- don't** after linking words.

- ✓ *Thereafter, do not forget the redesign process.*
- X *Thereafter, not forget the redesign process.*
- ✓ *Before, do not avoid the function of information systems.*
- X *Before, not avoid the function of information systems.*

Examples

- *First, I need to perform an analysis. Second, identify the requirements and then design a plan.*
- *Next, start the design to establish some strategies.*
- *Finally, the implementation process, the designed plan put into practice..*
- *Thereafter, use that information to identify the present state of the business, which is the "As Is-process".*
- *After the analysis process, you check the requirements.*
- *That's correct! I did it earlier.*

Learning Points

Processes involved in business

A business process is a group of activities that follows a common objective known as an organization goal. It determines the steps to achieve a goal.

You can create a business process according to the market requirements, considering two stages the Present and the Future, properly mentioned as Is-process and To-Be process.

As Is process	A To-Be process
Current state process	Future state process
existing state of the business	upcoming state of a business

Information systems represent business processes through a life cycle that starts from the analysis and finishes with an implementation to finally reach a goal. Those stages are the following:

Goal Directed Activities

Analysis:

To double-check the present situation with the customer and some other variables.

Requirements:

The condition stated by a customer to achieve the goals or established condition to enhance a process.

To -Be process.

Design:

To establish a plan, specifying strategies during the process, including the funding process.

Development:

Conduct consecutive actions to successfully complete the process.

Implementation:

To put into practice the designed plan.

Information systems transform any process to make it more efficient, that is why information systems represent an accurate option model to fulfill business processes requirements.
