Let's Start!

Let's talk about diagramming a business process.

Learning Outcome:

Understands systems theories, business processes and basic concepts on IT.
Create a map of processes that allows identifying areas in an information system, using IT tools to generate reports based on the company's needs.

Ask your partner:

- Do you use diagrams to study? Why?
- What computer program can you use to draw a diagram?

Can Do Statements:

- I can understand written information about how to diagram a business process.
- I can answer questions related to diagramming a business process.
- I can write very simple ideas for a business diagram.

Let's Explore!

Sam is reading a book, and Helen asks him for some information on it.

Instructions: Read the text below.

- Sam:** Look at this, Helen. I'm reading this book about business, and I have a good idea to implement this information into our current business process diagram for the company.
- Helen:** What are those tables?
- Sam:** These are the diagrams. We can use one of them to show our business processes in an organized and punctual way. Many companies are currently using them to represent their business processes graphically; I am now creating my own diagram.
- Helen:** What are the components of the diagram?
- Sam:** Well, there are the actors. An actor is an entity who makes decisions or takes action inside the business process; as you can see, each actor is standing on a swim lane. We use arrows to connect their actions.
If we get to a point where we need to make a decision, we use a diamond to indicate the existence of a decision point.
- Helen:** Okay, I understand the symbols and arrangement now. What business processes do we represent with the diagram?
- Sam:** Do you remember the As-Is and To-Be processes?
- Helen:** Sure.
- Sam:** Okay. With this diagram, we can show both of these processes. We start by analyzing the current state of the business. Then, we take information from the clients; their point of view is quite important, and it can facilitate reaching the goals. From that information, we can determine the current barriers and the possible solutions to overcome them; this is exactly the point we are at with our current business process analysis. The next steps are designing the process based on the data we have, develop and implement it. I am currently organizing everything to start this part of the process.
- Helen:** Thanks for your time and explanation.
- Sam:** You are welcome.

Let's Practice!

Liz is learning how to diagram a business.

Instructions: Match column A with column B.

COLUMN A

1. Look, I am reading this book about business, and I
2. Let me see, I am
3. I'm thinking about

COLUMN B

- a. simple ideas to embody in a diagram.
- b. seeing only diagrams.
- c. designing the diagrams.

Let's Practice!

What does this symbol do?

Instructions: Read the dialogue. Select the correct answer.

1. This symbol...
 - a. has a lot of functions.
 - b. has one function.
 - c. doesn't work properly.
2. That symbol represents...
 - a. an action state for payroll process.
 - b. an action states for sell management.
 - c. customers' needs.
3. This symbol describes...
 - a. in a long way employees' contracts.
 - b. employees' contracts in brief.
 - c. employees' payment.

Extension Activity

A business diagram for a company.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about one company, you can choose what you want.
- Describe what the company is about and what it offers.
- Write what actors that company has, what actions they can do, and what the best way to be successful is.
- Draw a diagram with all the information you have.
- Share your diagram with the class, and discuss about what the most appropriate diagram is.

Self-Assessment

Yes

No

- I find information about a company.
- I identify what a company produces.
- I recognize different actors and actions inside a company.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **Implement** (verb): to put a plan into operation
e.g. I have a good idea to implement this information into our current business process diagram for the company.
- **swim lane** (noun): a row or column in a table; this name comes from the lanes you find in swimming pools
e.g. As you can see, each actor is standing on a swim lane.
- **both** (adjective): including one and the other; the former and the latter as well
e.g. With this diagram, we can show both of these processes.
- **barrier** (noun): an obstacle; something that does not allow you to get or do something
e.g. From that information, we can determine the current barriers and the possible solutions to overcome them.
- **overcome** (verb) : to prevail over a bad circumstance
e.g. From that information, we can determine the current barriers and the possible solutions to overcome them.

Learning Points

Present Continuous: Current Actions

You use the present continuous for things that are happening at the very moment you talk or for temporary situations that are happening around now (but not at this exact moment).

One way in which you use the **present continuous** is to talk about things you are doing at the very moment of speaking.

This is the structure you use for the **present continuous**:

Subject + **verb to be** (am-is-are) + **verb -ing** + complement.

Remember you have to choose the correct form of the verb to be depending on the subject: **am** for the first person singular, **is** for the third person singular, and **are** for the remaining ones.

Example:

*I **am designing** the diagram right now.*

Another use of the **present continuous** is to talk about extended actions that take place **now** but not at this very moment. Remember that **now** can mean this hour, today, this week, this month, this year, and so on; not only this very second or minute.

Example:

*Diagramming **is becoming** a relevant technique.*

(It is not happening right now; it is a temporary condition up to the present)

Don't forget the spelling of the verbs when adding the suffix -ing:

ADDING -ING	
When the verb...	Example:
Ends in e , you drop the e and add -ing :	write- writing
Ends in ee , you just add -ing:	see- seeing
Ends in ie , you change it by y , then add -ing	lie - lying die- dying
Ends in a consonant-vowel-consonant sequence, you double the last consonant (X,Y and Z are an exception to this rule)	set- setting stop – stopping fix-fixing buy – buying

Examples

- *I'm reading this book about business, and I have a good idea to implement this information into our current business process diagram for the company.*
- *Many companies are currently using them to represent their business processes graphically.*
- *I am currently organizing everything to start this part of the process.*

Learning Points

Tips To Diagram A Business Process

The action of diagramming a business process allows organizing every people involved in it. It helps to simplify and represent the tasks and actions assigned to every person or actor in the business, including the interaction and multiple roles.

These are some tips to apply when designing a diagram to represent a business process:

Simplified Form Of A Business Process Diagram

1. It is useful to understand the business process first and then diagram the steps.
2. Identify actors and put them in a swim lane. (actors can be either people or a computer)
3. Identify the actors' roles in each stage of the business process.
4. By using swim lanes, you can relate business actors' performance and roles.
5. The process flow can start at the top and continue going down.
6. Use arrows to represent connection between actions.
7. Diamonds represent decision points.
8. Sometimes, it is useful to delete non-essential elements, to make the diagram easy to read.
